Synopsis

Highway Maintenance has never been so challenging! Hotter summers, colder winters, more intense rainfall and an ever older network means using the same techniques and materials is no longer an option.

At a time of depleting budgets it is too easy to assume that the cheapest option is the best solution. But in reality the best whole life cost approach is even more important with reducing budgets, you make the money last longer with innovative solutions and build yourself out of a reactive maintenance system into a planned maintenance regime.

By use of case studies using innovative materials and processes this Training Day will provide delegates with the knowledge and confidence to choose specialist repairs instead of standard, thus saving time, money and CO².
